

STREET GULLY TOP CAST IRON

PRODUCT DESCRIPTION

The street gully with PVC base is made of strong and shape-resistant PVC.

Possible sewer blockages are avoided as this gully will retain sand and other debris. The gully has a collection capacity of 20 litres. Thanks to the odour trap, bad odours from the sewage system will also be prevented.

The street gully has a load class B (125 kN) and is equipped with a pivoting grate. This makes the gully easy to open and close during maintenance.

PVC base:

Height: 70cm

Connection: Siphon Ø125

Volume below the connection: 20 liter

Grid:

Material: Cast iron classe B125

Dimensions of the grid: 33 x 33cm

Street gully:

Total height: 76cm
