

FILTER IN CONCRETE

PRODUCT DESCRIPTION

This concrete filter can be placed on top of the rainwater tank. So we have the filter and the tank invisible under the same cover. Rainwater from the roofs falls down through the stainless steel filter into the tank. The dirt remaining on the grid is washed away via the overflow of the tank.

The internal dimensions of the filter are 60x60x60cm and correspond to the cut-out of a concrete rainwater tank. The connections can be provided on each side of the filter and starts from Ø200 up to Ø400.

The maximum roof area that can be connected to this filter is 1600m².

Material: Concrete
Color: Grey
Connection 1: Spigot
Connection 2: Spigot
Connection 3: Spigot
Connection 4: Spigot
